

Select Quality Growth & Income Portfolio

Fact Sheet

As of 6/30/2021

Highlights

- Seeks to generate returns above the broader market without taking undue risk.
- The strategy combines selective Portfolio Manager qualitative focus with intensive quantitative analysis to pursue the objectives of capital appreciation and income.
- Stock holdings are monitored on an ongoing basis to ensure consistency with the portfolio's objectives. Changes are also reviewed for tax efficiency.
- The portfolio management team, Mike Scherer and Tim McCann, has over 35 years of combined experience.
- The portfolio is best suited for investors with a long-term time horizon.
- The strategy has moderate turnover and the dividend yield is expected to be in line with the S&P 500.

Objective

Seeks to provide capital appreciation and income through a diversified portfolio of high-quality stocks.

Portfolio Characteristics

Inception	January 1, 2006
Number of Holdings	31
Benchmark	S&P 500 TR
Weighted Avg. Dvd. Yield (%)	1.9
Weighted Avg. Mkt. Cap. (\$ Bln)	303.5
Price / Earnings (1-yr. forecast)	15.4x
Annual Turnover - 2020 (%)	61.5

Performance Overview

December 31, 2005—June 30, 2021

Growth of a \$100,000 investment

Risk Statistics (10-Year, Monthly)

	Portfolio	Benchmark
Standard Deviation (%)	15.94	13.53
Sharpe Ratio	0.73	1.05
Beta	1.10	1.00
R-Squared	0.87	1.00
Alpha (%)	-3.31	0.00
Batting Average (%)	48.33	100.00
Up-Market Capture (%)	99.46	100.00
Down-Market Capture (%)	114.00	100.00

All risk measures are based on a 10-year time period using monthly returns.

The growth of \$100,000 chart presented herein is for illustrative purposes only. The chart illustrates the growth of \$100,000 should it had been invested at the time of inception and includes reinvestment of dividends. It does not assume withdrawals or contributions. Any results shown above may not represent the actual experience of individual investors. Individual account performance may differ due to, e.g., account size, cash flows, investment restrictions, economic factors, and fees.

About EquityCompass

EquityCompass is a Baltimore-based SEC registered investment adviser offering a broad range of portfolio strategies and custom plans for individuals, financial intermediaries, and institutional clients in the U.S. Formally organized in 2008, EquityCompass provides portfolio strategies with respect to total assets over \$4.6 billion as of June 30, 2021.*

The EquityCompass team of professionals represents deep industry experience in security analysis, capital markets, and portfolio management. We are committed to a consistent investment process that relies on enduring principles, sound empirical reasoning, and the recognition of a dynamic investment environment with a global reach.

All charts and tables are calculated by EquityCompass using data provided by FactSet Research Systems, Inc.

DESCRIPTION OF TERMS**Alpha**

The relationship between the performance of the strategy and its beta over a three-year period of time.

Batting Average

A measure of a manager's ability to beat the market consistently, the Batting Average is calculated by dividing the number of quarters in which the manager beat or matched an index by the total number of quarters in the period. For example, a manager who meets or outperforms the market every quarter in a given period would have a batting average of 100. A manager who beats the market half of the time would have a batting average of 50.

Beta

A measure of the volatility, or systematic risk, of a security or a portfolio relative to the market as a whole. A beta of one is considered as risky as the benchmark and is therefore likely to provide expected returns approximate to those of the benchmark during both up and down periods. A portfolio with a beta of two would move approximately twice as much as the benchmark.

Down-Market Capture Ratio

Down-Market Capture Ratio is a measure of managers' performance in down markets relative to the market itself. A down market is one in which the market's quarterly return is less than zero. The lower the manager's down-market capture ratio, the better the manager protected capital during a market decline. A value of 90 suggests that a manager's losses were only 90% of the market loss when the market was down. A negative down-market capture ratio indicates that a manager's returns rose while the market declined. For example, if the market fell 8% while the manager's returns rose 2%, the down-market capture ratio would be -25%.

R-Squared

R-Squared is a statistic that measures the reliability of alpha and beta in explaining the manager's return as a linear function of the market. If you are searching for a manager with a particular style, for example a growth manager, you would expect that manager to have an R-Squared that is high relative to a growth index if the manager has a diversified portfolio. If the manager's return is explained perfectly, the R-Squared would equal 100, while an R-Squared of 0 would indicate that no relationship exists between the manager and the linear function. Higher R-Squared values indicate more reliable alpha and beta statistics and are useful in assessing a manager's investment style.

Sharpe Ratio

Sharpe Ratio is one of two alternative, yet similar, methods of measuring excess return per unit of risk. (The other method is the Treynor Ratio.) In the case of the Sharpe Ratio, risk is measured using the standard deviation of the returns in the portfolio. The Sharpe Ratio relates the difference between the portfolio return and the risk-free rate to the standard deviation of that difference for a given time period.

Standard Deviation

Standard Deviation is a gauge of risk which measures the spread of the difference of returns from their average. The more a portfolio's returns vary from its average, the higher the standard deviation. It is important to note that higher-than-average returns affect the standard deviation just as lower-than-average returns. Thus, it is not a measure of downside risk. Since it measures total variation of return, standard deviation is a measure of total risk, unlike beta, which measures market risk.

Up-Market Capture Ratio

Up-Market Capture Ratio is a measure of managers' performance in up markets relative to the market itself. An up market is one in which the market's quarterly return is greater than or equal to zero. The higher the manager's up-market capture ratio, the better the manager capitalized on a rising market. For example, a value of 110 suggests that the manager captured 110% of the up market (performed 10% better than the market) when the market was up. A negative up-market capture ratio indicates that a manager's returns fell while the market rose. For example, if the market gained 8% while a manager's returns fell 2%, the up-market capture ratio would be -25%.

DISCLOSURES

EquityCompass Investment Management, LLC is a wholly owned subsidiary and affiliated SEC registered investment adviser of Stifel Financial Corp ("Stifel"). Registration does not imply a certain level of skill or training. Affiliates of EquityCompass may, at times, release written or oral commentary, technical analysis, or trading strategies that differ from the opinions expressed within. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situation, or needs of individual investors. This material is based upon information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied upon as such. Any projections, targets, or estimates in this report are forward looking statements and are based on EquityCompass research, analysis, and assumptions made by the Adviser. Changes in market conditions or a company's financial condition may impact a company's ability to continue to pay dividends. Companies may also choose to discontinue dividend payments. Due to their narrow focus, sector-based investments typically exhibit greater volatility and are generally associated with a high degree of risk. Rebalancing may have tax consequences, which should be discussed with your tax advisor. Actual performance for a client may differ due to such factors as timing, economic and market conditions, cash flows, and client constraints. Diversification does not ensure profit or protect against loss.

*Total assets combines both Assets Under Management and Assets Under Advisement as of June 30, 2021. Assets Under Management represents the aggregate fair value of all discretionary and non-discretionary assets, including fee paying and non-fee paying portfolios. Assets Under Advisement represent advisory-only assets where the firm provides a model portfolio and does not have trading authority over the assets.

Representative Portfolio Performance: Returns reflect the performance of two representative portfolios that have been strung together for the life of the strategy. One portfolio was selected because it is the oldest account in the strategy with a continuous track record that also did not have large cash flows or mandate changes. The other portfolio was selected to capture returns from the strategy's inception up to the open date of the oldest continuous account referenced above. EquityCompass believes the representative performance is useful in terms of presenting the objectives and character of the strategy, however, returns are calculated separately for each portfolio, and therefore, performance may differ from one portfolio to another. There is no assurance that EquityCompass will make any investments with the same characteristics as the representative account presented. Portfolio 1 reflects returns from 1/1/06 – 3/31/06 and Portfolio 2 reflects returns starting 4/1/06. Gross-of-fees returns are not reduced by any fees, expenses, or transaction costs (i.e. Pure Gross). Net-of-fees returns are presented after the deduction of the manager fee of 0.50% until 6/30/18 and 0.35% starting 7/1/18. There will be additional wrap sponsor fees, including trading expenses and management fees, which will vary by wrap sponsor. These additional fees will lower overall net performance. Please consult the wrap sponsor ADV Part 2A for additional fee information.

The specific securities identified and described herein do not represent all of the securities purchased, sold, or recommended to advisory clients, and the reader should not assume that investments in the securities identified and discussed were or will be profitable. A complete list of all recommendations made by the firm is available upon request.

The Standard & Poor's 500 Index is an unmanaged, capitalization-weighted index that includes the reinvestment of dividends but does not include adjustments for brokerage, custodian, and advisory fees. This index is generally considered representative of the U.S. large capitalization market. Indices are unmanaged, do not reflect fees and expenses, and are not available for direct investment. The S&P 500 Total Return Index seeks to replicate the economic performance of a total return on the S&P 500. The volatility of the indices identified in this report may be materially different from the volatility of the model portfolios presented by EquityCompass. Indices are unmanaged, do not reflect fees and expenses, and are not available for direct investment.

Past performance does not guarantee future performance or investment results.
